

R RVT

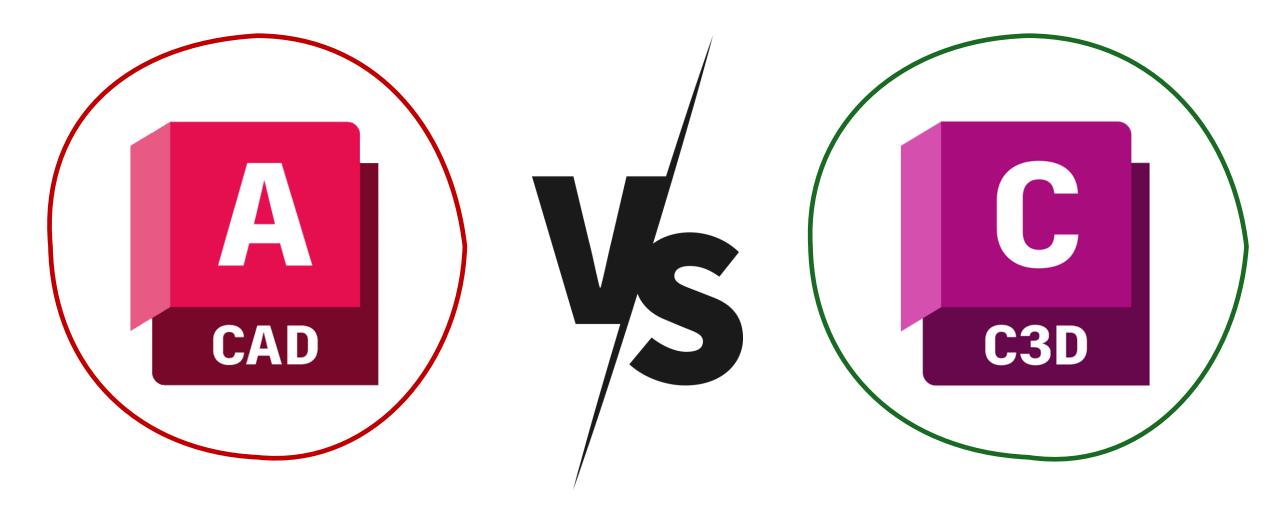

ENG. Mostafa Mashaal

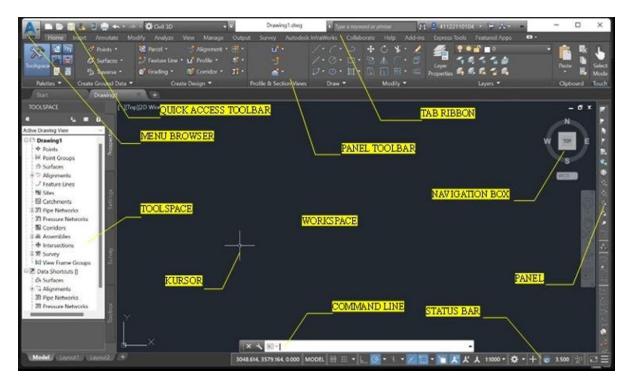

С

C3D

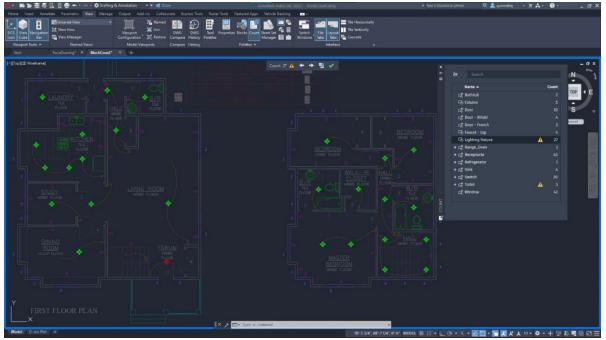

WHAT WILL YOU LEARN?

- The key differences between Civil 3D and AutoCAD
- What Civil 3D is capable of and how it enhances design workflows
- How to create and manage surfaces in Civil 3D, including exporting them to Revit
- An introduction to alignments
- Understanding corridors
- Overview of pipe networks and their components
- Understanding profile views to visualize design elevations
- Pressure networks
- Using electrical networks within Civil 3D
- Exploring catalogs, part families, and part sizes
- Understanding the difference between Properties and Toolspace

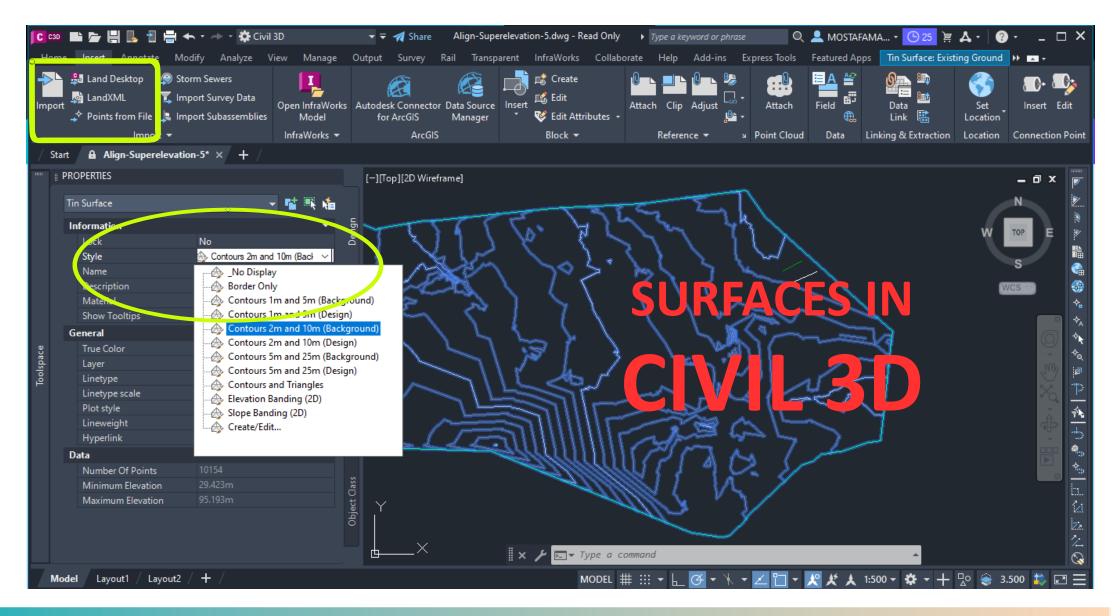

AUTOCAD

CIVIL

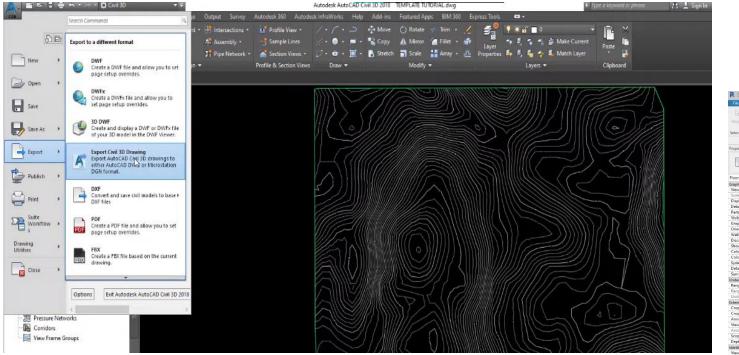

WHAT CIVIL 3D CAN DO?

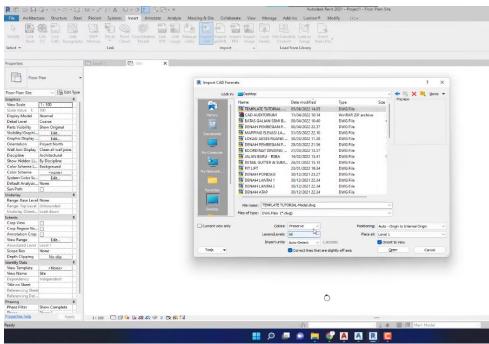

Survey & Surface Modeling – Import points, create terrain models, analyze topography
Alignment & Profile Design – Design roads, rail, and pipelines with precise geometry
Corridor Modeling – Build 3D models for roads and compute quantities
Pipe Network Design – Design storm, sewer, and water systems with flow analysis
Grading & Earthworks – Automate grading and calculate cut/fill volumes
Plan Production – Automate plan/profile sheets and dynamic annotations
Data & BIM Integration – Collaborate via BIM 360, Infra Works, Revit & GIS
Customization – Automate with Dynamo, Python, or .NET API

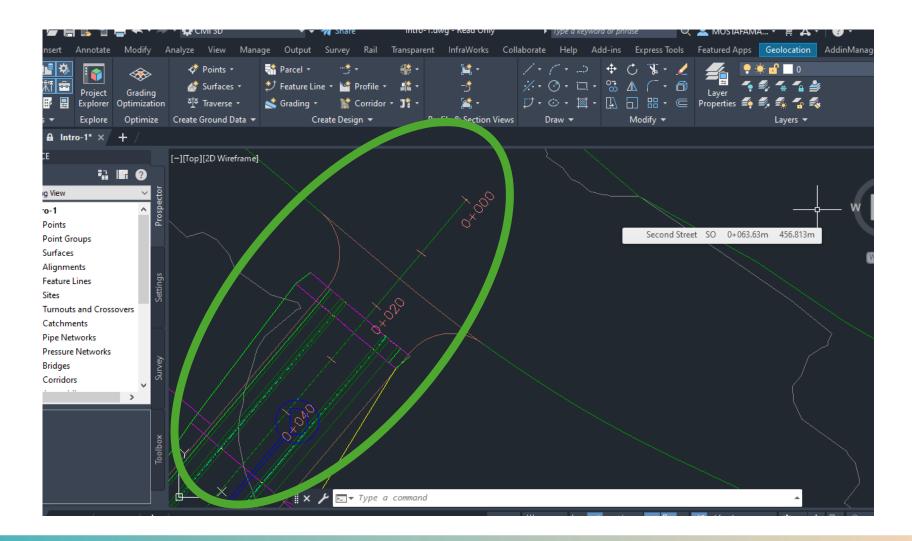

EXPORT SURFACE TO REVIT

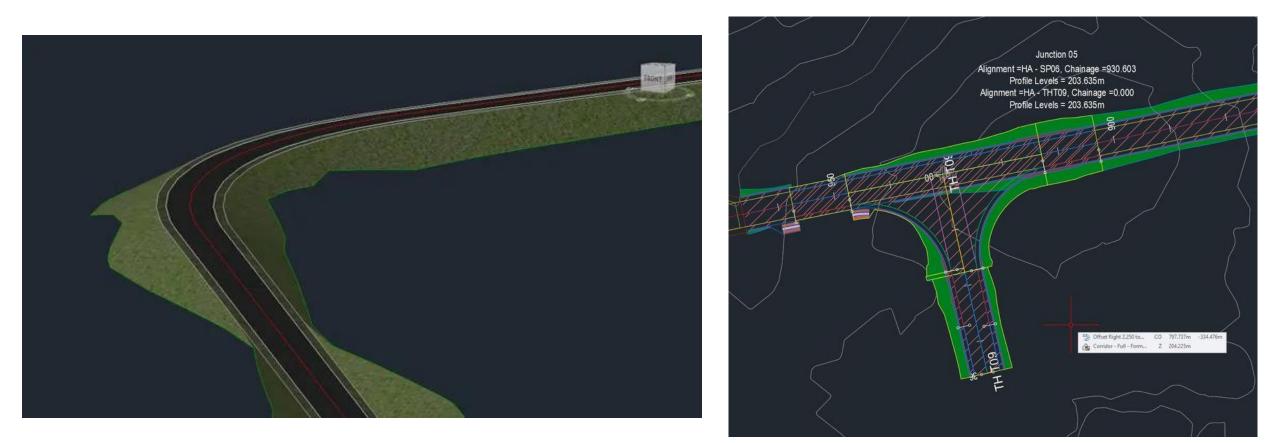

WHAT IS AN ALIGNMENT?

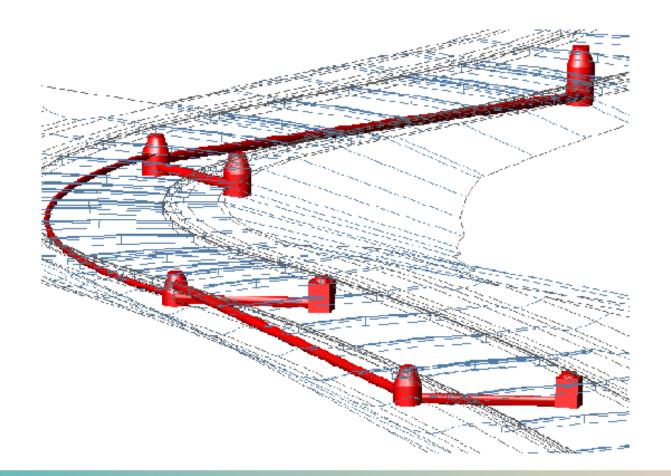

CORRIDOR MODELING
